Web Site Security Options

SecureConnect (Shared SSL certificate)

When you choose the SecureConnect option for your web site, only the association's private side login page will be SSL secure. When a homeowner clicks on "resident login" from the home page, they will be re-routed behind the scenes to <http://www.residentlogin.com> where SSL encryption will take place and the resident will see the familiar security lock icon at the bottom of the screen.

<i>SecureConnect</i>	<i>Set up Fee</i>	<i>Monthly Fee</i>

Premium Community Agreement	\$50	Free

Share. Inform. Educate. Communicate.

SecureSite (Non-Shared SSL Certificate)

When you choose the SecureSite Option, the community or management company will have it's own unique SSL certificate. The advantages of this plan over a shared SSL plan are: **all** private-side pages are SSL encrypted between the server and the browser, not just the login page, is not exposed via the SSL certificate. Residents researching the certificate will see a familiar name, either their community name or the management company name. This plan requires the acquisition of an SSL certificate in the name of the Management Company or the community. It also requires a dedicated IP address on the server for the site/domain that hosts the SSL certificate. If the Management Company chooses the SecureSite plan, then all of their Preferred Plan clients will receive this benefit.

<i>SecureSite</i>	<i>Set up Fee</i>	<i>Monthly Fee *</i>
Community through a Management Company		
➤ Management Company establishes SecureSite for all Preferred Plan Clients	\$150	\$15
➤ Pointer and Premium Plan	\$150	\$15
